Profit Margin % by Category

Key Insights (2026)

- 1) Technology is the top revenue category.
- 2) West is the best performing region; South is the weakest.
- 3) Revenue peaks in November and drops in January (Seasonality).
- 4) Top 7 customers contribute ~ 82% of revenue (concentration risk).
- 5) Phones show strong profit. Tables show profit leakage (high sales, low/negative profit).

Recommended Actions

- 1) Improve weak region performance (South):
Investigate discounts, shipping delays, and customer mix.
- 2) Fix profit leakage:
Review profit/discount strategies for low performing segments (e.g. Tables)
- 3) Reduce customer concentration risk:
Create retention plan for top customers and grow mid tier customers.

Metric Definitions & Validations

Metrics Used

1. **Total Revenue** = $\text{SUM}(\text{Sales})$
2. **Total Profit** = $\text{SUM}(\text{Profit})$
3. **Profit Margin %** = $\text{Total Profit} / \text{Total Revenue}$
4. **Orders** = $\text{DISTINCTCOUNT}(\text{Order_Id})$
5. **AOV (Average Order Value)** = $\text{Total Revenue} / \text{Total Orders}$
6. **MoM Revenue Growth%** = $(\text{This Month Revenue} - \text{Previous Month Revenue}) / \text{Previous Month Revenue}$
7. **MoM Profit Growth %** = $(\text{This Month Profit} - \text{Previous Month Profit}) / \text{Previous Month Profit}$

Validation Checks (to ensure numbers are correct)

1. **Cross-check Revenue**
 - * Power BI Total Revenue matches Excel Pivot total revenue
2. **Orders logic**
 - * Orders = $\text{DISTINCTCOUNT}(\text{Order_Id})$ (not COUNT) to avoid duplicates
3. **Grain Check**
 - * Dataset grain is order-line level (one row per product per order)
 - * Avoid inflated totals when aggregating
4. **Date consistency**
 - * Order Date converted to proper Date type to avoid time-intelligence errors
5. **Sanity Checks**
 - * Revenue and Profit remain stable when slicers are applied
 - * No unexpected spikes from duplicate rows
